

# Modeled Projections: Wisconsin

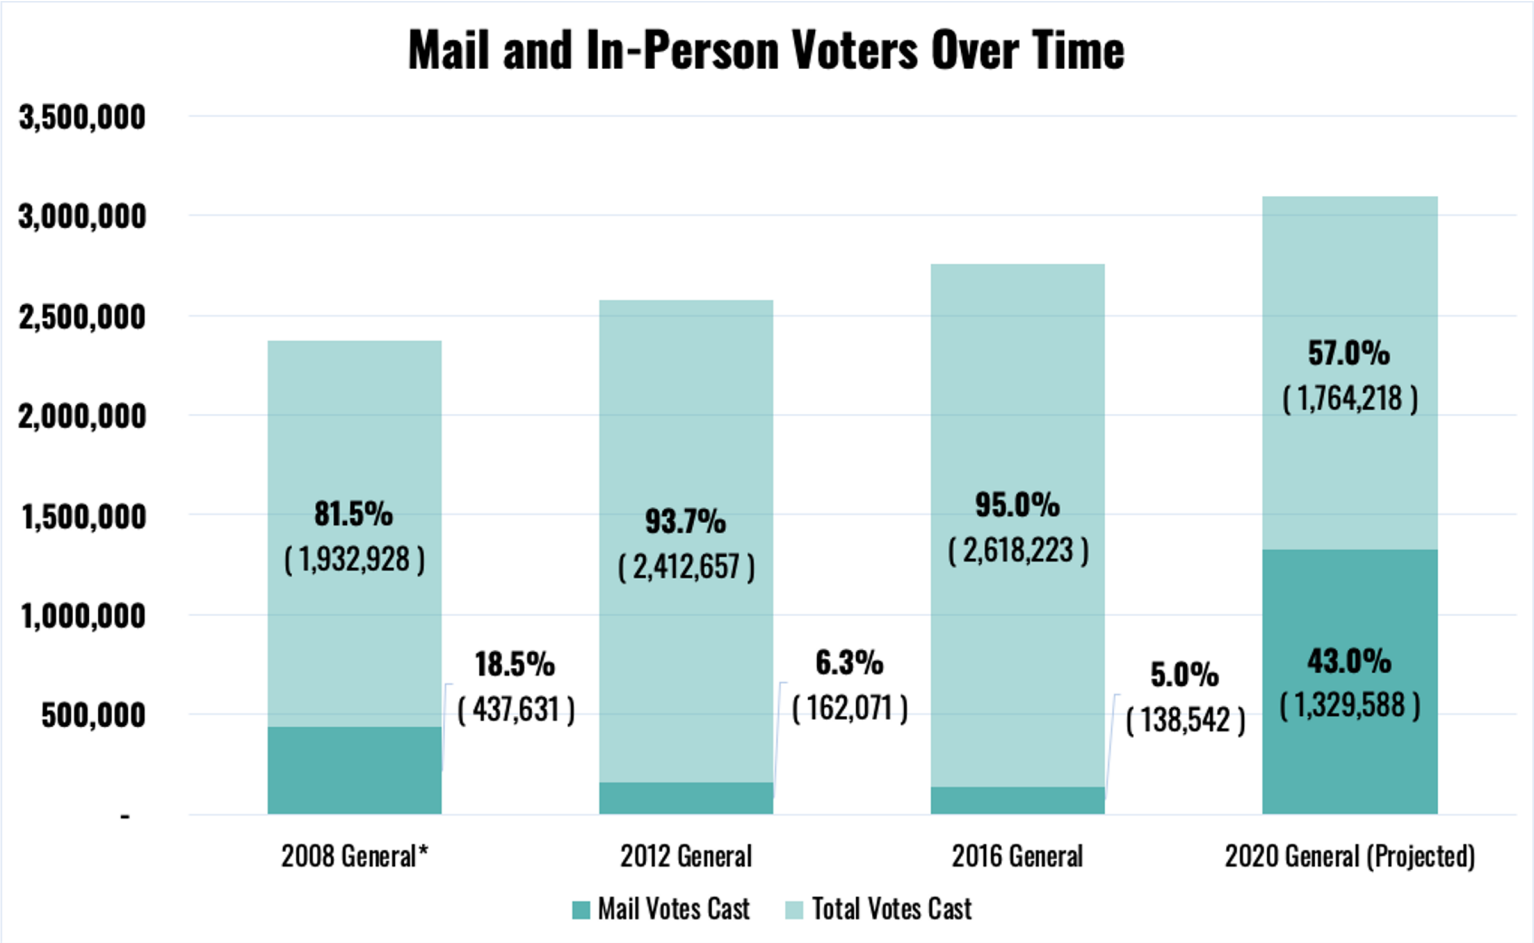

*powered by*

**CITIZEN DATA**

# Relative to recent electoral history,

2020 Wisconsin turnout and absentee rates are higher.

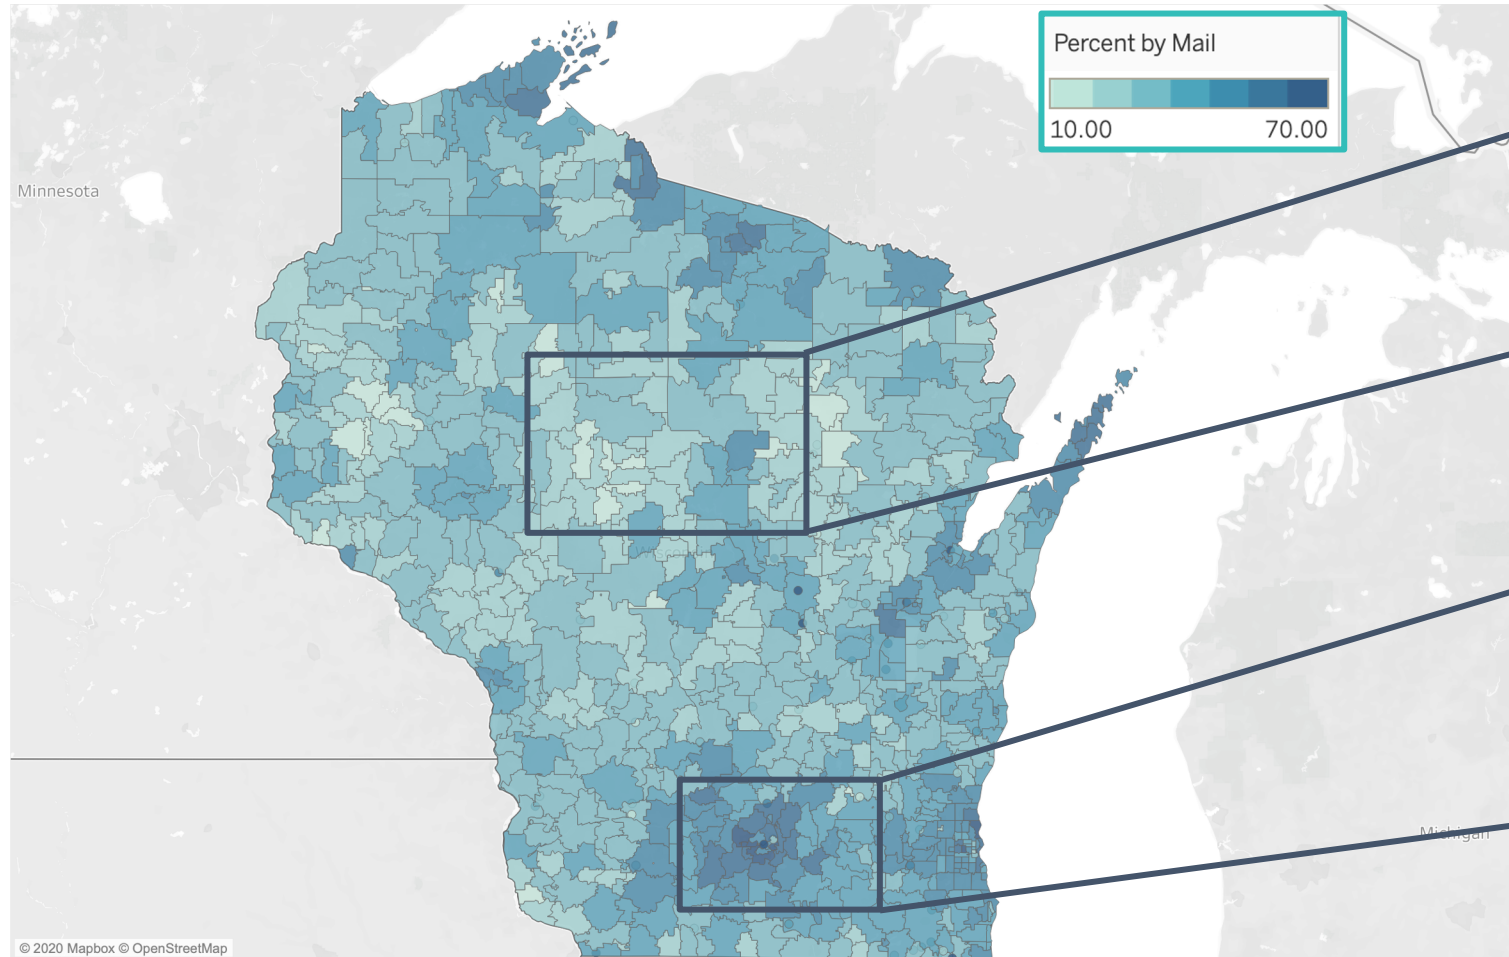

\*In 2008, the Wisconsin Secretary of State included both early in-person votes and mail-in votes in the same statistic, explaining the higher rate.

Overall, over 3 million voters are expected to turn out in the Wisconsin 2020 general election. About 43% of those votes are projected to be cast by an mail-in ballot. So far, 1.1 million Wisconsin voters have requested ballots.

# Absentee voting rates vary by population density,

with greater proportions of urbanites voting absentee than rural voters.

**In rural parts of Wisconsin, in-person turnout will occur at higher rates.**

**Election administrators near Madison should expect rates of absentee voting nearing 70%.**

**Wisconsin is likely to see a big difference in absentee turnout between densely populated and rural areas. In urban areas, mail voting turnout rates may be as high as 70%, while rural areas may see almost all likely voters vote in-person.**
