CITIZEN DATA

Relative to recent electoral history,

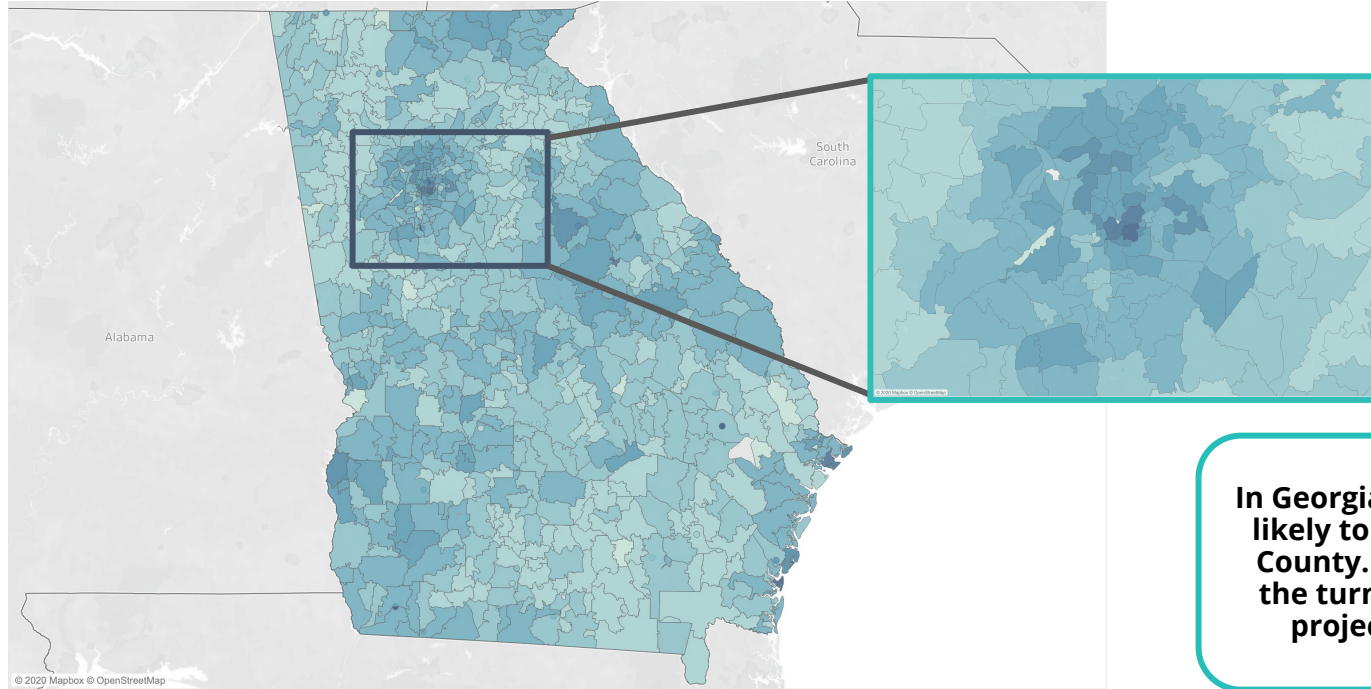

2020 Georgia vote by mail rates are much higher.

Based on the pace and number of absentee ballot requests at this time and our modeled projections that factor in past voter turnout, as many as 4 million voters are expected to turn out in the Georgia 2020 general election. About 44% of those votes are projected to be cast by an absentee ballot. As of October 6, 2020, 1.4 million Georgians have requested mail ballots.

Georgia mail-in voting rates are well spread,

but the majority of mail voting will occur in Atlanta.

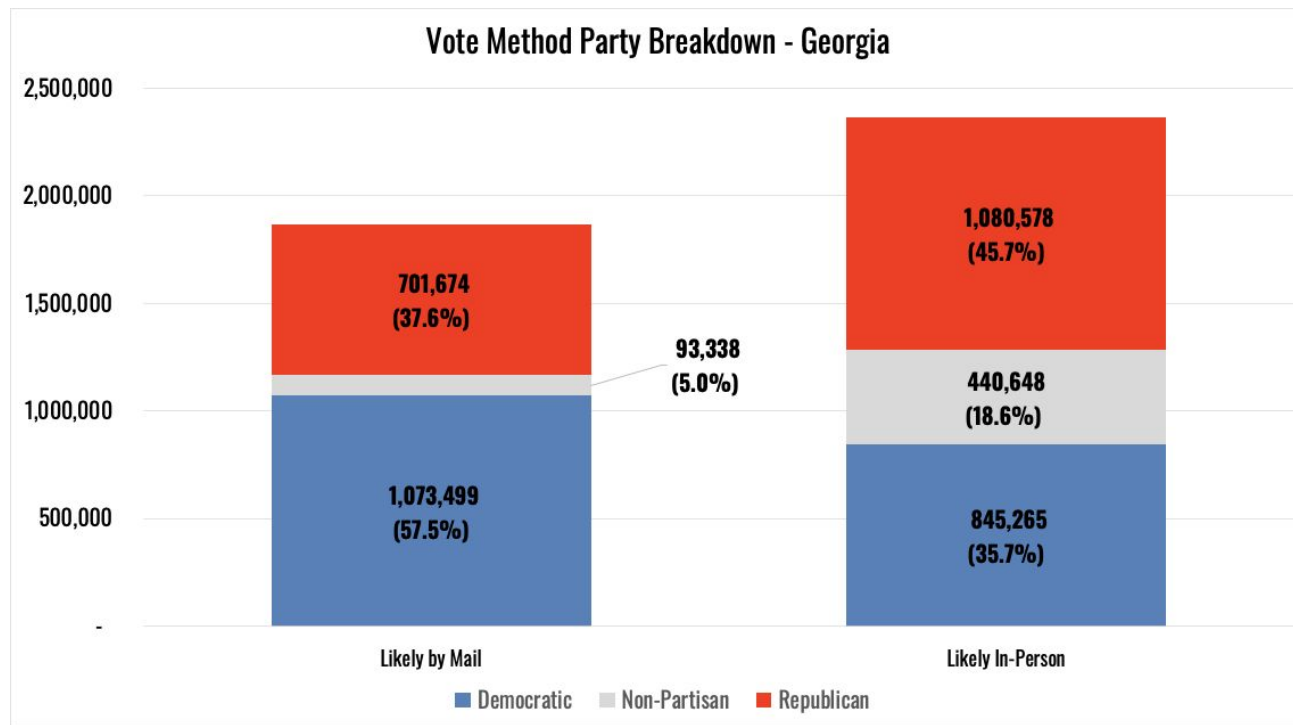

In Georgia, the vote by mail is likely to be 54.7% in Dekalb County. For Fulton County, the turnout rate by mail is projected to be 50.8%.

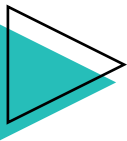

The map of projections reveals that there will be pockets of high vote-by-mail rates across the state. The greatest volume of mail in ballots will come from Fulton and Dekalb counties, which, together, are projected to total about 400,000 ballots, or 20% of total mail-in ballots.

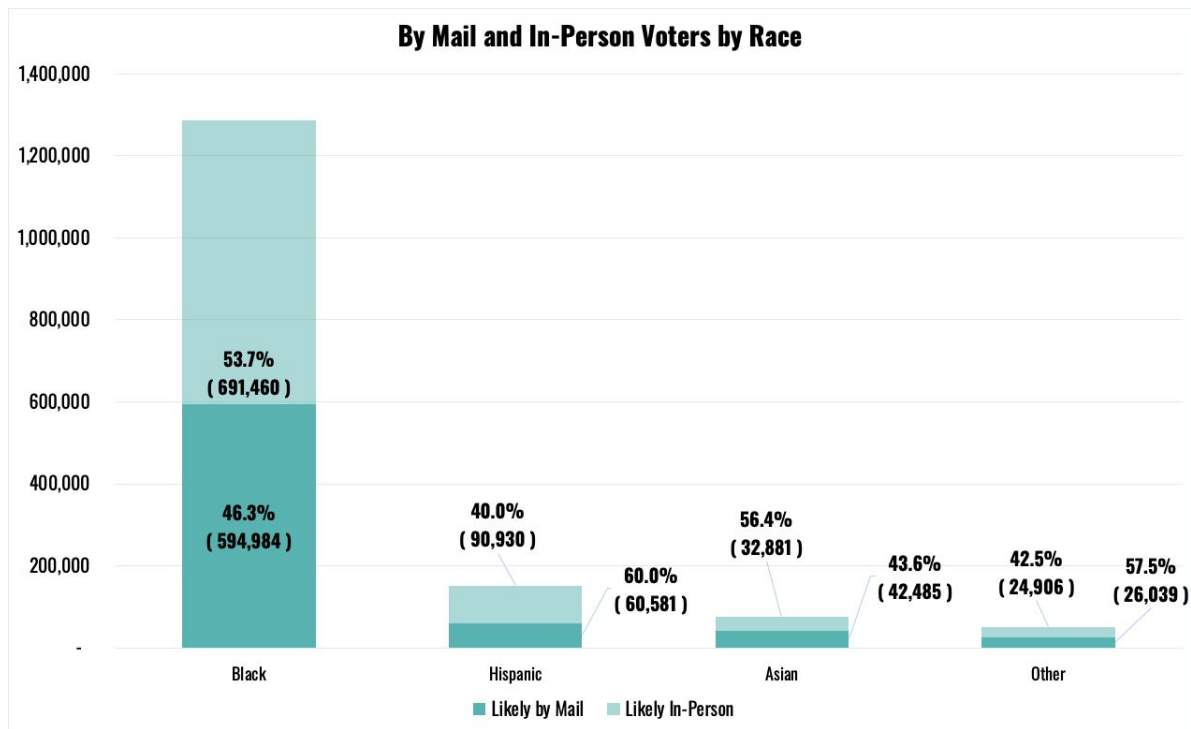

Georgia Democrats are likely to vote by mail, but is more evenly split than other modeled states.

In Georgia, Democrats make up more than half of likely mail voters and are 20 percentage points more likely to vote by mail than Republicans. Republicans are likely to have 10 percent more of the in-person vote than Democrats. Similar to Michigan, non-partisan voters make up nearly 1/3 of in-person voters.

White voters will have the lowest vote by mail rates in Georgia, while Black voters return 600,000 mail ballots.

White voters represent the greatest portion of votes cast in Georgia. About 2.4 million white voters are projected to cast a ballot in Georgia and about one million of those (42.5%) are likely to be cast by mail or dropbox. All other demographic categories are expected to see higher rates of mail voting, including Black voters, who are projected to near 50% mail voting rates.
