

# Modeled Projections: Florida

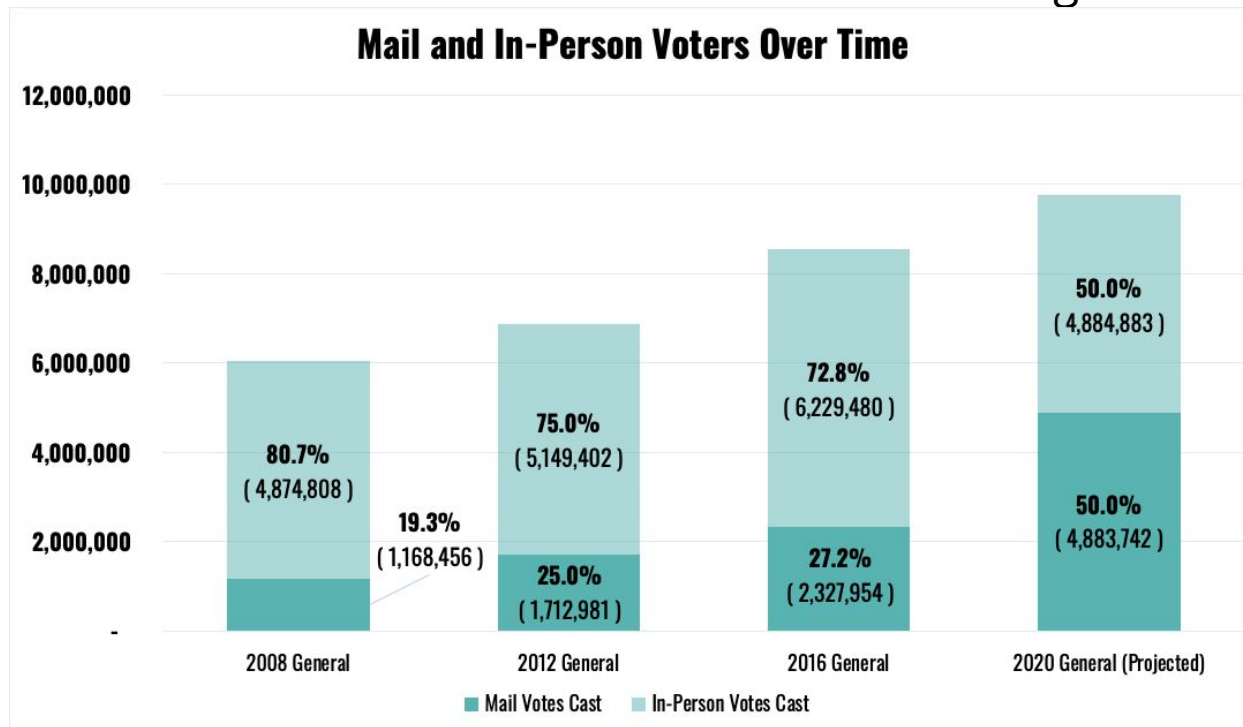

*powered by*

**CITIZEN DATA**

# Relative to recent electoral history,

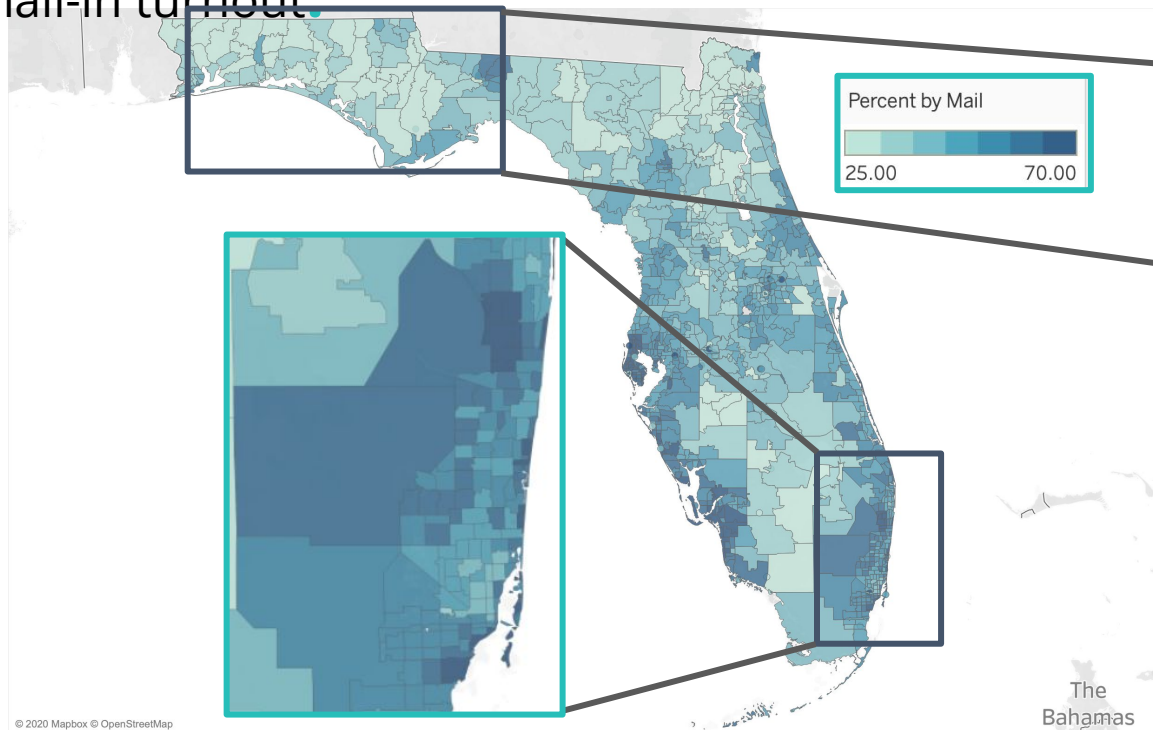

2020 Florida turnout and absentee rates are much higher.

Overall, over 9.5 million voters are expected to turn out in the Florida 2020 general election. About 50% of those votes are projected to be cast by an absentee ballot. So far, 4.9 million Florida voters have requested ballots.

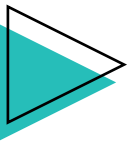

**most in person,**

while the coasts will see the highest concentration of mail-in turnout.

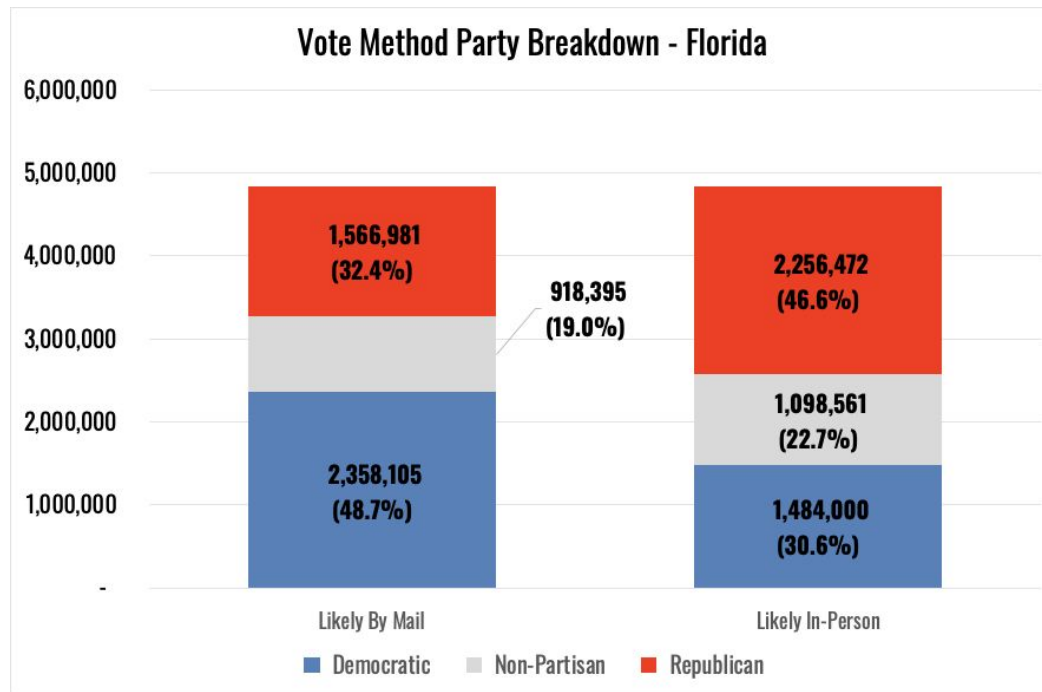

**The panhandle is projected to have relatively higher rates of in-person voting.**

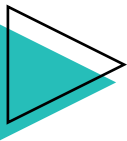

**We expect disparity in the geographic distribution of mail voting rates in Florida. The panhandle and Central Florida are expected to have lower vote-by-mail rates, while the coasts will see higher rates. Even within each locality, there will be geographic differences. Zooming into the Miami-Dade area, we see that Boca Raton and Delray Beach will have mail-in rates, while Fort Lauderdale and Hollywood will have slightly higher in-person rates than the surrounding area.**

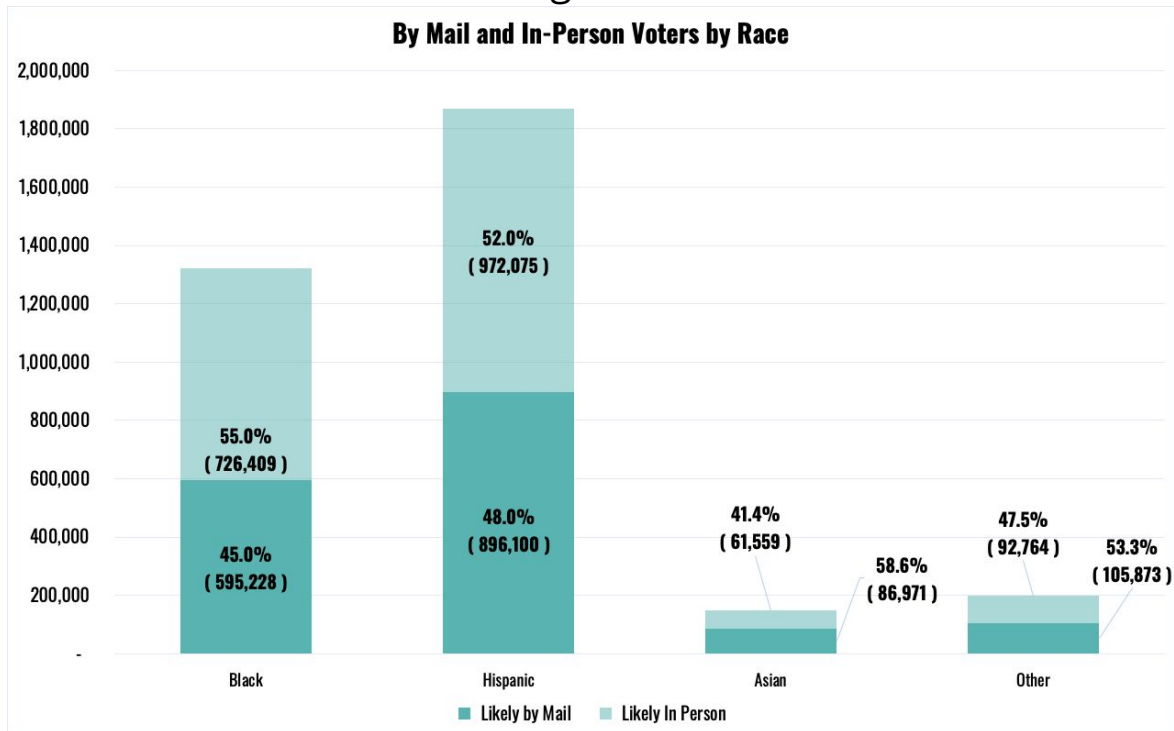

# Democrats make up nearly half of mail votes, and Republicans make up close to half of likely in-person votes.

Republicans are projected vote much less by mail than Democrats in Florida. Like in most states, Democrats will drive absentee turnout, but partisan differences are less pronounced than other states.

**Regardless of race, voters are likely to split evenly on vote method,** though Asian voters will lead mail voting rates.

**White voters represent the greatest portion of votes cast in Florida. Just over 5.6 million white voters are projected to cast a ballot in Florida and about 3 million of those (52.5%) are likely to be cast by mail or dropbox. Black and Hispanic voters have slightly lower rates, but will still vote by mail at rates nearing 50%.**
